BIOMETRIC UPDATE - May 2020

STid and Nedap partner

STid and Nedap have partnered to launch a physical access control solution with card-based biometrics or user smartphones.

STid's Architect readers and software have been integrated with Nedap's AEOS platform for optional one, two, or three-factor identification. The combined solution provides enhanced security, and cost effectiveness based on an optimized infrastructure, according to the announcement.

"Our workshops did enable us to test the integration of Architect readers, also with biometric options and Stid Mobile Virtual cards. Mutually we can easily say, STid and Nedap hardware are a perfect match," explains Nedap Integration Manager Wesley Keegstra.
