STid Mobile ID®: Three reasons to deploy a Mobile Access Solution

The STid portfolio contains a solution to manage and use virtual access cards based on an innovative business model. STid Mobile ID® is a solution that simplifies managing and issuing virtual cards by storing them on smartphones, whether or not in combination with conventional access cards. We discuss on three reasons to select STid Mobile ID® with **Bastien Castets**, Regional Sales Director Middle East.

A powerful solution with an instinctive identification experience

98% of employees consider access control as intrusive. STid Mobile ID® is offering a great user experience, which significantly improves the support of security policies and security systems.

Users of the system can carry their virtual access cards on their smartphone using a free app. The smartphone, our precious personal device, basically coverts into an access control key, resulting in improved operational effectiveness, flexibility and instinctiveness.

The solution supports six different, but all very instinctive modes of identification and user interaction. STid Mobile ID® is compatible with SIRI on iOS and also with Apple Watch. An efficient way to reconcile high security and health protection measures! This way, the solution is easily adapted to various use cases, without any compromise on usability or security.

An important element of the STid Mobile ID® platform is the easy-to-use and powerful administrative portal, which puts you back in control of security management. You can now deploy hundreds of cards with just one mouse-click!

A unique business model without any subscription and recurring costs

STid Mobile ID® is based on a unique business model, that sets this solution apart from any other virtual card management solution. The use of STid Mobile ID® virtual badges does not require any subscription. Customers only pay a fee when virtual cards are issued. Moreover, when virtual cards are revoked,

we allow our customer to re-issue these virtual cards to other users, without any additional cost. Virtual cards can be re-used without limitation.

That is why the total cost of ownership of STid Mobile ID® virtual cards is much lower than that of any other security identifier, whether in physical or virtual form. Once obtained, a STid Mobile ID® virtual card can be used as long as you want, without hidden fees. You pay it for once and it remains your property. There are no recurring costs and virtual cards cannot be lost or broken. And STid also makes sure there is no compromise on the quality of service or the level of security

"Security by Design"

The STid Mobile ID® platform, including the readers, never store personal information when it can be avoided. The data encryption and authentication methods that are used support secure data storage and data communication in accordance with the recommendations of the French national information system security agency (ANSSI) and the Federal Information Processing Standards (FIPS).

We fully embrace the paradigms of "data protection by design" and "security by design". STid supports end-to-end security throughout the application infrastructure. The communication protocol SSCP® guarantees the protection and confidentiality of data. Clients are in full control of their application and their security keys. They have exclusive access to their account. Access by anyone else is made technically impossible, except if you choose to provide personalized access rights or administration rights to other users. And if you want to be absolutely sure that no corporate data or personnel data is used outside of your perimeters, STid even supports on-premises installation of the STid Mobile ID® server. This will keep all data physically within your organization. STid Mobile ID® facilitates a great user experience, but you are always in full control of your security policies.

To conclude, STid Mobile ID® badges are now used for much more than access control! Many customers and partners have integrated STid Mobile ID® in their access control, identity management, smart building, printing, leisure and event subscription solution. The STid Mobile ID® ecosystem has expanded so much in recent years, that the solution by now is considered the unofficial standard for virtual cards. 🔒
